

GMA trains sights on economy

By David L. Johnson
Special to The Kansas City Star

With the coming of the new year, the community is faced with a new challenge. It is the challenge of the GMA (General Motors Association) to train its members in the use of the new year's resolution. The GMA is a non-profit organization that has been working to help the community in many ways. It has been successful in many areas, but it is now facing a new challenge. The GMA is now training its members in the use of the new year's resolution. This is a new challenge for the GMA, but it is one that it is determined to meet. The GMA is now training its members in the use of the new year's resolution. This is a new challenge for the GMA, but it is one that it is determined to meet.

PRESIDENTIAL ELECTORAL PROTEST

SC starts hearing FPJ case vs GMA today

By Philip C. Salinas

THE SUPREME COURT (SC) today started its hearing on the presidential electoral protest filed by Ferdinand Marcos Jr. against the results of the 2010 elections, which he lost to Benigno Aquino III.

The hearing, which is the first of a series of hearings on the protest, will be held in the SC's 12th floor courtroom.

The protest was filed on May 19, 2010, and the SC has been hearing it since then.

The protest is based on the claim that the results of the 2010 elections were fraudulent.

'Green' architects appeal to developers for nature's balance

By Noel B. Salas

SOME developers are now taking notice of the green movement. They are now more inclined to build green buildings that are not only eco-friendly but also healthy for the people who live in them. This is a good sign, as green buildings are becoming more popular in the Philippines.

ANDREW LIM
Chairman of the Green Building Council of the Philippines (GBCPH)

More green buildings

According to the Green Building Council of the Philippines (GBCPH), there are now more than 1,000 green buildings in the Philippines. This is a significant increase from the previous year, when there were only about 500 green buildings. The GBCPH is a non-profit organization that promotes the use of green building practices in the Philippines.

Benefits

Green buildings have many benefits. They are more energy-efficient, which means they cost less to operate. They are also healthier for the people who live in them, as they have better indoor air quality and more natural light.

One of the main reasons why green buildings are becoming more popular is because they are more cost-effective. Green buildings use less energy and water, which means they have lower operating costs. This makes them a more attractive option for developers and owners.

Government incentives

The government has also been encouraging the development of green buildings. It has introduced several incentives for developers who build green buildings, including tax breaks and faster processing times for permits. These incentives are helping to make green buildings more financially viable for developers.

Global movement

The green building movement is a global phenomenon. It is not just limited to the Philippines, but it is also gaining momentum in other parts of the world. This is because green buildings are becoming more popular everywhere, as people are becoming more aware of the benefits of green buildings.

Conclusion

Green buildings are becoming more popular in the Philippines, and this is a good sign. They are more cost-effective, healthier, and more environmentally friendly than traditional buildings. As the green building movement continues to grow, we can expect to see even more green buildings in the Philippines.

State of the nation

THE 1991-92 season will be a record one for the U.S. dairy industry. The total milk production is expected to reach 16.5 billion gallons, up from 16.2 billion in 1990-91. The increase is due to a combination of factors, including a record 1.5 billion gallons of milk produced in the first half of the season.

John Small

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and network architecture. It also involves identifying the roles and responsibilities of the various stakeholders involved in the project.

Figure 1 is a line graph showing the effect of the concentration of the inhibitor on the rate of polymerization. The y-axis is labeled "Rate of polymerization" and ranges from 0 to 1.0. The x-axis is labeled "Concentration of inhibitor" and ranges from 0 to 1.0. The curve starts at (0, 1.0) and decreases as the concentration of inhibitor increases, approaching 0.5 at a concentration of 1.0.

Gun store robbed 1 dead

By Marcus C. Davis

A robbery at a gun store in the city of San Francisco resulted in the death of a man. The store, located in the city's downtown area, was targeted by several individuals who entered the premises and began to loot the shelves. The store owner, who was not injured, managed to escape the scene and report the incident to the police. The police are currently investigating the case and have identified several suspects. The store owner expressed his shock and sadness over the incident, stating that he had been in the business for many years and had never experienced anything like this before.

World

The world is a complex and ever-changing place. It is a place of both beauty and tragedy, of hope and despair. The world is a place where we all live, and it is up to us to make it a better place. We must work together to solve the problems that face us, and we must strive for a more just and equitable world. The world is our home, and it is our responsibility to take care of it.

How often for fire

The frequency of fires in a community is a complex issue that depends on many factors. These factors include the weather, the type of buildings, the quality of the fire department, and the behavior of the residents. In some communities, fires are a common occurrence, while in others, they are rare. The fire department plays a crucial role in preventing fires and responding to them when they do occur. Residents can also help to prevent fires by following safety guidelines and being aware of their surroundings.

Major rehab for 9 Metro roads

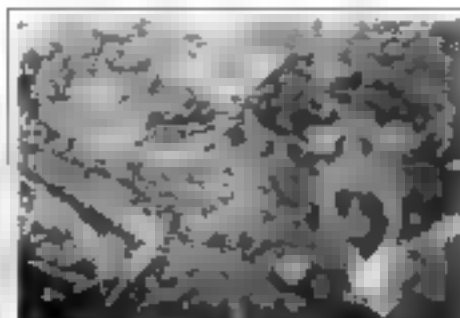

Photo: The Daily Explorer. Construction workers are seen working on a major road rehabilitation project in the city of San Francisco. The project involves repaving and widening several major roads, which will improve traffic flow and reduce travel time for commuters.

Construction halts at Padre Rada

By Steve J. Domenech

Construction work on a project in Padre Rada has been halted. The project, which was intended to improve the infrastructure of the area, has encountered several challenges that have led to the decision to pause the work. The challenges include budget constraints, delays in obtaining permits, and difficulties in coordinating with local residents. The project manager has expressed his frustration over the situation, stating that he had hoped to complete the project by now. He has also expressed his understanding of the challenges that the project has faced and has promised to work with the local community to find a solution.

By Steve J. Domenech

The project in Padre Rada has been a long and difficult one. It has involved a lot of planning and coordination, and it has faced many challenges along the way. The project manager has been working hard to overcome these challenges, but it has not been easy. He has had to make many tough decisions, and he has had to deal with a lot of pressure. Despite these challenges, he remains committed to the project and believes that it will be worth the effort in the end.

The project in Padre Rada is a testament to the power of community and the importance of infrastructure. It shows that with the right leadership and the support of the community, we can overcome even the most difficult challenges. The project manager has been a key figure in this process, and his dedication and hard work have been instrumental in getting the project to this point.

Caravan family

The caravan family is a group of people who travel together in a caravan. They are often from different parts of the world, and they come together to share their experiences and to enjoy the journey. The caravan family is a close-knit group, and the members of the family are often very supportive of each other. They travel together for a variety of reasons, including to see the world, to relax, and to spend time with family and friends.

Endangered bridge

By Steve J. Domenech

The bridge in question is a historic structure that has been in use for many years. It is a vital link between two parts of the city, and it is a source of pride for the community. However, the bridge is in a state of disrepair, and it is in danger of collapsing. The city has been working to repair the bridge, but the work has been slow and the cost has been high. The city has asked the community for help, and it has received a lot of support. The community has organized fundraisers and has donated money to help with the repairs.

The bridge is a symbol of the city's history and its resilience. It has withstood many challenges over the years, and it has always been there for the community. The bridge is a reminder of the importance of infrastructure and the need to take care of it. The city and the community are working together to ensure that the bridge remains a safe and reliable link between the two parts of the city.

The city and the community are working together to ensure that the bridge remains a safe and reliable link between the two parts of the city.

Return military discipline in the police

The return of military discipline in the police is a controversial issue. Some people believe that it is necessary to have a strong, disciplined police force in order to maintain law and order. They believe that military-style training and discipline are essential for police officers to be able to handle the challenges of their job. Others, however, believe that the police should be a civilian force, and that military-style discipline is not appropriate for them. They believe that the police should be held to the same standards as other civilian professions, and that they should be subject to the same laws and regulations.

On Tanager

By Steve J. Domenech

The tanager is a small, colorful bird that is found in the tropical rainforests of Central and South America. It is a member of the family Thraupidae, and it is known for its bright colors and its melodious song. The tanager is a popular bird among birdwatchers, and it is often seen in the wild. The tanager is a symbol of the beauty and diversity of the tropical rainforest, and it is a source of pride for the people of the region.

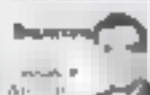

Figure 1 consists of four scatter plots arranged in a 2x2 grid. The top row shows the relationship between the number of children and the number of children who are not in school for the year 2000. The bottom row shows the relationship for the year 2005. The left column shows the relationship for the year 2000, and the right column shows the relationship for the year 2005. Each plot has 'Number of children' on the x-axis and 'Number of children not in school' on the y-axis. The plots show a positive correlation between the two variables, with the correlation being stronger in 2005 than in 2000.

Executive summary

Figure 1. A schematic diagram of the experimental setup. The subject is seated in a chair, viewing a video screen. The screen displays a target (a small circle) and a starting point (a larger circle). The subject's hand is positioned at the starting point. The distance between the starting point and the target is labeled as 'distance'. The subject is instructed to move their hand from the starting point to the target. The video screen is connected to a computer system, which records the subject's movement. The computer system is also connected to a data acquisition system, which records the subject's movement data. The data acquisition system is connected to a computer, which stores the data. The computer is connected to a printer, which prints the data. The printer is connected to a plotter, which plots the data. The plotter is connected to a graph, which shows the data. The graph is connected to a table, which contains the data. The table is connected to a database, which stores the data. The database is connected to a network, which connects to the internet. The internet is connected to a server, which stores the data. The server is connected to a client, which accesses the data. The client is connected to a user, who uses the data. The user is connected to a system, which uses the data. The system is connected to a process, which uses the data. The process is connected to a result, which is the final output of the system.

Wish and means committee

THEir goal is to help small businesses survive the economic downturn. The committee is made up of representatives from various business groups, including the National Federation of Independent Business (NFIB), the U.S. Chamber of Commerce, and the Small Business Administration (SBA). They are working to identify and address the challenges small businesses face, such as access to capital, talent, and technology. The committee will hold a series of public hearings and consultations with business leaders to gather input and develop recommendations for policy and regulatory changes. The committee's work is expected to continue through the end of the year.

Small businesses are the backbone of the U.S. economy, creating more than 80 percent of new jobs. However, they are also the most vulnerable to economic downturns. The committee's mission is to ensure that small businesses have the resources and support they need to thrive. They will focus on areas such as tax policy, regulatory relief, and access to credit. The committee will also work to promote innovation and entrepreneurship among small businesses. By addressing the needs of small businesses, the committee hopes to stimulate economic growth and create more jobs.

6 Japan firms vying for PNOC-EDC deals

By Abigail L. Ma

SIX JAPANESE suppliers are vying for \$ 4 billion plus, almost P1 billion worth of wind power project contracts that involve the construction of a 40-megawatt (MW) wind farm facility and a 42 kilometer transmission line.

Philippine National Oil Co. Energy Development Corp. (PNOC-EDC) awarded these six firms qualified to bid for the first phase of the Northern Lamon Wind Power Project (NLWPP) in Surigao, Butuan River.

Four of these companies, all joint ventures, will bid for the wind farm components of the project. They are Incheon Corp. and Hanyu Electric, Sumitomo Corp. and GE Wind, Mitsubishi Corp. and Mitsubishi Heavy Industries and Kawasaki Corp. with Nippon.

The winning joint venture will construct a 40-MW wind farm and other related facilities on the site.

For the transmission line, bidders are Sumitomo Corp. and Mitsubishi Corp.

This contract involves the construction of a 42 km transmission line connecting the wind farm facility to the National Transmission Corp. substation in Ligu, as well as the establishment of a switchyard at the site.

Construction starts on the Ligu substation to accommodate the NLWPP will also be undertaken by the winning bidder.

The bidders are expected to submit their offer in October, with the winners to be awarded their respective contracts by the first quarter of 2005. Construction will start immediately after.

The two contracts form the first phase of PNOC-EDC's 25-MW NLWPP which is envisioned to be Surigao Area's largest commercial wind farm.

This phase is funded by the Japanese government under a special yen loan that amounts to almost \$ 4 billion plus.

PRESCRIPTIONS

Preventing a power crisis

By Francisco L. Vega

(End of 4th part)

THE PHILIPPINES will soon have a storm on "horizon" and a half and a half year. It involves a power crisis and runaway budget deficits, as well as possible long-term solutions to high rates of electricity, leading to three alternative positions: a serious like solving the crisis but not solving the others. The only realistic solution is to really implement the Free Electric Power Industry Reform Act, as it was envisioned, creating a truly competitive power industry. But that came around.

There is no storm but doing so. Any further delay will create unhappiness, as only demand and government plants using expensive diesel oil and coal fuel as the only solution to avert a shortage again. That will surely result in higher electricity costs, increasing the challenges before us in public health aspect.

Serious steps have to be taken to manage the operation of the Free and competitive, including of that power the existing power crisis. Topping the list is for the government to launch a multi-phase infrastructure campaign about the Free.

It is of utmost importance to realize the public understanding about Free's vision is all about that it is to ensure the supply of quality, reliable and affordable electricity through a privatized and competitive power industry.

Private sector investments

Having almost no other option to cover a public crisis, it seems there is no alternative but to seek the private sector as a way out in the industry. By all means, let us be circumspect and prudent in our contracts and dealings with the private sector but it will not help us a bit if we continue denouncing them.

To prevent shortages, investment in new capacity must happen. The contracting to new capacity will have to take the risk in demand growth, something which the government used to do under a regulated water market. It will give the risk, otherwise will have to rely on their creditworthiness to sell through the Wholesale Electricity Spot Market (WESM) under such an alternative.

Without one of the two, an alternative will come in and the government will have to consider for FPI to be built the new capacity and take the risk again on demand growth. The danger is that the government will endeavor to bear the cost without its debt situation and pushing the country to the brink of a debt crisis.

Spot market, privatization

The rule of WESM as a competitive market must be understood. While it is expected to account for a maximum of 10 percent of the supply, it is an indicator of the short-term market price for electricity in effect. It gives the market signals and sets the industry players in their planning and future investment. WESM will provide the primary signal for the private sector to build new merchant power plants, which will only be built in a developing country like ours if the political and regulatory regime is clear, predictable and stable. WESM must have that predictability and stability.

The privatization of National Power Corp. still hangs in the air. Recent developments show National Transmission Corp. or Transco may not be privatized alone if the government wants, after all, up to now, Transco has not attracted many serious bids even if it posted a profit of P 5 billion in 2001. It is high time for the government to consider other models of privatization for Transco other than the "concessionaire" model. Equity privatization of up to 40 percent with a strategic partner can be the viable alternative model.

With artificially low generation rates, the privatization of Napac's generating assets cannot get off the ground unless the government will take a loss on the sale. This is something the government cannot afford right now.

Napac's and PSALM's recent decision to

push for a P100-MW increase in power rate will need a lot of political will, especially from the Energy Regulatory Commission and government support from the national and local government leaders, but it is a step in the right direction if any measure has to succeed.

Privatization must be accelerated because our infrastructure needs happen even with the WESM if the government continues to fund some of the generation assets as Napac will have no "large enough" WPP. Because it can significantly lower its rates as it is funded by the government. Privatization pricing by the government is a threat to competition. Operating as a loss is as possible as the public crisis is being as possible just.

One really wants Napac to put up the right strategy. Definitely, privately say Napac will lower the government's debt further making it a more of deficit. At the very least, this will keep the bankruptcy of the government closer.

Race against time

Then, WESM and privatization must happen just in time to give enough lead time for both alternatives. For example, if a plant owner plans to build a plant and he thought will start in 2005, WESM and privatization must happen no later than end 2004.

Meanwhile, it must be noted that the WESM will not work if there are shortages. The WESM only works as a period of the day. Considering that shortages are expected to happen no less than 100 days, the WESM must already be established as a competitive market. It is not a race against time. In fact, if a plant owner plans to build a power plant, there is really no time left to spend.

While the WESM is an important feature to deliver competition, bilateral contracts reduce the role of private sector investments and play a very important role in stabilizing power rates. But the prevailing artificially low rates of Napac, used as the basis or benchmark for the Transco supply contracts (TNC), awarded under the Free, do not encourage rate-based mode of generation. This is because a private private distribution utility (DUI), and rural electric cooperatives (RECs) from distributing power under the subsidized TNC rates in rural areas. The TNCs are supposed to help under bid for Napac's privatization. Thus, reducing Napac rates to market levels will keep the backbone and allow the flow of new investment in generation.

Cross-subsidy removal

Another important feature of the Free is the cross-subsidy removal. This is very important as it will make rate-making transparent and reflective of the true cost of power, thereby promoting fair competition.

Subsidies indirectly favor the more affluent residential consumers. The more you consume, the more subsidy you get. The irony about it is that residential customers with large consumption are being subsidized by both the government and industries (at the industry rates at the expense of vital sectors such as education, health, agriculture and social services). It also sacrifices the competitiveness of our industries.

Some sectors of society will need some government support, subsidies can still be given but in a more transparent manner and only to the low-income group. This can be done by identifying those segments from the tariff as a low-cost surcharge or an electricity cost added to the electricity bill like the national charge. Doing it this way really supports the poor and clearly shows how much the government is willing to subsidize.

The universal charge covers minority electrification and addresses subsidy requirements for electricity infrastructure and for communities of remote islands and barangays. To be continued.

(The author is former president of Napac and energy secretary, Napac chair.)
